

Easy. Flexible. Affordable.

web-based electronic health records and
practice management service takes
patient care to the next level

Quality care requires the best information tools

ENABLEDOC STREAMLINES WORKFLOW FROM APPOINTMENTS TO DOCUMENTATION TO BILLING

The screenshot shows the 'Templates Master' interface for a 'Physical Examination' template. It includes a 'Sections' list on the left, a 'General Body Examination' form in the center, and a 'Fields' table at the bottom. The form has fields for Name, Code, Field Type, Gender, and Status. The 'Fields' table lists various examination options like 'normal', 'tender', 'no pain', and 'mild pain' with corresponding codes and status.

Improving patient care and operating a profitable practice requires use of the best healthcare information software. Our software is designed for quick entry, simple access to patient information, robust communication, and efficient electronic orders and information exchange. All EnableDoc modules work in concert to build the patient chart for each encounter and simultaneously create a patient note, claim, and statement.

PERSONALIZED WORK FLOW: CUSTOM MENUS, TEMPLATES, AND ADVANCED WORD PROCESSOR

We provide a standard set of templates and forms for each specialty, but each physician may create custom templates with text boxes, pull down menus, check boxes, yes/no menus, and tables. Each template is assigned to a form and are automatically selected based on visit type, specialty, location, and physician. Information from vitals, prescriptions, diagnosis, HPI, orders, and custom templates can be automatically inserted into a note. Our advanced word processor is used to make modifications, insert images, add tables, customize letterhead, and sign notes. Addendums are also supported.

CARE MANAGEMENT & QUALITY MEASURES

Custom decision support and care maintenance rules can be added to provide alerts and send notifications to patients via the Enablemyhealth portal or letters. These same rules can be used for quality measure tracking. All meaningful use rules are setup in the system for ease of management and reporting. PQRS and ACO measures can also be tracked and reported through the system.

ADVANCED TECHNOLOGY

- MICROSOFT® ASP.NET WEB TECHNOLOGY
- MS®SQL 2008 ENTERPRISE FOR DATABASE REDUNDANCY, EXTENSIBILITY, AND ENCRYPTION
- REDUNDANT POWER, STORAGE, AND DATA PIPES IN A HIPAA SECURE DATA CENTER
- XML, HL7, EDI, X12, NCDPD, FILE EXCHANGE INTERFACE GATEWAY WITH INTERFACE MONITORING AND ALERTS
- 256 BIT SSL DATA ENCRYPTION

CLAIMS & COLLECTIONS MANAGEMENT

EnableDoc's billing module operates both with or without the EHR module to expedite claims processing and payments collection. Physician groups are able to create payer claims, print HCFA 1500 forms, electronically send claims via any clearinghouse, print or send patient statements, and manage the entire collections process. Collections are easily categorized and assigned to employees. Advanced management tools enable detailed filtering of medical claims, denials, collections, and account receivable information. A complete set of financial reports are also provided. Claim and collection notes can be made with each collection activity or status change. A billing dashboard displays key information on monthly, annual, and year-to-date financial criteria for daily financial management.

ENABLING EFFICIENT COMMUNICATIONS

Communicating amongst staff, patients and referring physicians has never been easier. Sticky Tasks are used to send messages and assign tasks to a single employee or group. These messages can be linked to a patient record. Enablemyhealth™

portal enables patients, parents, and other physicians to securely access patient

medical summary, notes, and files. Multiple patients can be assigned to each portal account. Patients also receive health care notifications via the portal. Emails are sent to alert users of new patient information.

ELECTRONIC PRESCRIPTIONS, LABS, & ORDERS

Orders may be placed for labs, images, procedures, and all other services by easily searching through a coded services database or by selecting from past or favorite orders.

Prescriptions are written by selecting medications based on brand or generic name, diagnosis, past medications, or favorite medications. Dosage is automatically calculated based on patient gender, age, weight, and BSA. Physicians are alerted to interactions based on drug, allergy, condition, and foods taken. Prescriptions may be sent electronically via the Surescripts® Network, faxed, or printed.

FRONT DESK MANAGEMENT

Managing appointments, communicating with physicians and staff, registering patient demographics, and collecting payments are key EnableDoc Front Desk features.

ELECTRONIC HEALTH RECORD MANAGEMENT

Patient Dashboards display key patient information. Patient charts are organized by encounter and typically include vitals, chief complaint, history, ROS, physical exam, diagnosis, orders, prescriptions, and superbill.

CLAIMS & COLLECTIONS MANAGEMENT

Claims are easily created and managed with or without the EHR module. Claims and invoices can be printed or sent via a third party clearinghouse. Collections are managed with assignments, notes, and collection categories.

Join the Enabledoc Community We are Committed to Your Success!

Enabledoc is ONC Certified as a Complete Ambulatory EHR for meaningful use reimbursement under the America Reinvestment and Recovery Act. Our low monthly fee or per visit pricing is our commitment to ensure we perform and continue to meet your needs. Our advanced software-as-a-service requires no computer server or technical support. We require only an Internet connection. Additionally, our monthly fee includes a state-of-the-art online education and support community, software maintenance and upgrades, and Help Desk Support. We also offer one-on-one training and onsite training for additional fees.

Joining the EnableDoc Community gives you access to a comprehensive knowledge base, online forum, blog, guides, video tutorials, and EnableDecision™ clinical research tool.

Our Help Desk Team is ready to answer your questions or solve any EnableDoc problem. Contact us today to get started.
